PROFESSIONAL SUMMARY

Game Developer with a background in Digital Arts and Computer Science (CS50x). Dedicated to Unity and C# development with a strong focus on writing clean & maintainable code. I bridge the gap between artistic vision and technical implementation. Currently specializing in software engineering patterns and game scalability to transition into high-standard production environments.

TECHNICAL EXPERIENCE & PROJECTS

Flux - Solo Project

November 2025

- Developed a minimalist arcade experience focusing on Game Juice and feel.
- Programmed custom screen-wrapping logic and dynamic player-growth mechanics in C#.

The Last Potato - Solo Project

October 2025

Developed a time-manipulation prototype in 48 hours for the Unity 20th Anniversary Jam, focusing on rapid system integration.

- Architected a complete time-manipulation system and gameplay loop in under 48 hours.
- Ranked in #243 of the Unity Game Jam, demonstrating high-speed delivery and technical autonomy.
- Managed the full production pipeline: from system logic to final WebGL deployment on itch.io

Nara: Tower Defense - Unity Developer

July - August 2025

Stepped up to lead all programming efforts following a team restructuring, ensuring delivery for critical deadlines.

- Stepped in to handle all programming efforts, ensuring delivery for critical project milestones.
- Designed and implemented the UI architecture, localization pipeline (3 languages), and narrative systems.
- Optimized gameplay systems and integrated VFX/Audio to reach a polished, shippable state.

Speedrun To Diabetes - Solo Project

April - September 2025

A solo-dev exercise in clean architecture and design patterns.

- Focused on clean architecture and implementing the Factory Design Pattern for a modular procedural spawner.
- AI Research: Experimented with AI-assisted coding to generate scalable systems; while the automated output required significant manual refactoring, the process provided deep insights into code modularity and architecture constraints.
- Refactored the input system for cross-platform compatibility and implemented a persistent local high-score system.

Súper Libia - Game Programmer & Technical Artist

March - April 2023

- Developed core clicker mechanics and managed the 2D technical art pipeline.
- Rigged and animated characters within Unity and created custom shaders for enhanced visual feedback.

EDUCATION

CS50x Introduction to Computer Science – Harvard University

August 2025 - February 2026

- Focus: C, Python, Data Structures, and Algorithmic Thinking.

UT-HUB

May - June 2023

- Epic Bootcamp: Animation in Unreal Engine.

Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM)

August 2016 - December 2022

Bachelor of Arts, Digital Art

- Specialization in Animation and Game Development.

SKILLS

Programming: C# (Strong), Python, Lua, C.

Game engines & Software: Unity, Unreal Engine, GitHub, Visual Studio, VS Code, Adobe Creative Suite.

Development Skills: Game Design, 2D/3D Asset Integration, Scripting.
